Subject Index to Volume 15

Al-Zn alloys, kinetics of oxidation, 77

Carbon dioxide, oxidation of nimonic PE16, 231

Chromium carbide, formation from oxide, 331

Chromium nitride, nitrogen diffusion in, 447

Chromium, nitriding, 437

Chromium oxide, conversion to carbide, 331

Chromium oxide oxidation rate, 277

Coated MA-755E oxidation and hot corrosion, 251

Copper, logarithmic rate law, oxidation, 9

Corrosion, pure metals in basaltic lava, 21

Co-W eutectic alloy oxidation, 455

Creep, stainless steel in iodine vapor, 147

Cyclic oxidation, Ti-0.96Si, 199

Diffusion, nitrogen in chromium nitride, 447

Directionally solidified Co-W alloy oxidation, 455

Dispersion strengthened alloys, 251, 287

Electric field, effect of on iron oxidation, 137

Equilibration kinetics of nonstoichiometric oxides, 169

Eutectic, directionally solidified Co-W alloy, 455

Fe-5Cr-4Al alloys, 355

Fe-Cr alloys containing HfO_2 , oxidation, 287

Fe-Cr alloys, selective oxidation, 101

Fe, growth and structure of films on polycrystals, 421

Fe, structure of oxide on (001) and (112), 407

Grain growth, effect of on oxidation of stainless steel, 485

Hematite, thickness determination by Mössbauer Spectroscopy, 323

Hot corrosion, coated and bare MA-755E, 251

Hot stage scanning electron microscope, 471

Iodine vapor, effect of on stainless steel microstructure, 147

Iron, influence of electric field on oxidation, 137

Lava, corrosion of pure metals in, 21

Logarithmic rate law, 9

Magmatic gas, corrosion of pure metals in, 21

Magnetite, thickness determination by Mössbauer Spectroscopy, 323

Marker, nickel oxidation in SO_2 , 399

Mössbauer Spectroscopy, 323

Multicomponent oxides, 339

Ni-20Cr, oxidation in air with water vapor, 3

Nickel, oxidation in SO_2 , 399

Nimonic alloy PE16, oxidation in CO_2 , 231

$\text{NiO}-\alpha\text{-Al}_2\text{O}_3$ subsolidus phase equilibria, 495

$\text{NiO}-\text{NiCr}_2\text{O}_4$, reequilibration kinetics, 191

Niobium oxidation, oxygen tracer studies, 215

Nitridation, effect on Ti-0.96Si oxidation, 199

- Noncrystalline films, role in oxidation, 297
- Nonstoichiometric compounds, seminar report, 501
- Nonstoichiometric oxides, equilibration kinetics, 169
- Oxygen gradients, effect on multicomponent oxides, 339
- Oxygen tracer, Nb oxidation, 215
- Phase equilibria, $\text{NiO}-\alpha\text{-Al}_2\text{O}_3$, 495
- Reequilibration kinetics, $\text{NiO}-\text{NiCr}_2\text{O}_4$, 191
- Stainless steel, 25Cr-20Ni, grain growth effect, 485
- Stainless steel, 20Cr-25Ni-Nb, creep in iodine vapor, 147
- Subsolidus phase equilibria, $\text{NiO}-\alpha\text{-Al}_2\text{O}_3$, 495
- Sulfur dioxide, oxidation of nickel, 399
- Superalloy, effect of Ti and Ta on oxidation, 375
- Superalloy, MA-755E, hot corrosion, 251
- Surface, effect of on equilibration of nonstoichiometric oxides, 169
- Ta, effect on superalloy oxidation, 375
- Ti, effect on superalloy oxidation, 375
- Ti-0.96Si, cyclic oxidation, 199
- Whiskers, growth of during oxidation of Ni-20Cr, 3

Instructions to Contributors

1. Manuscripts should be sent to:
Prof. D. L. Douglass
Materials Department
Room 6531, Boelter Hall
University of California at Los Angeles
Los Angeles, California 90024
2. Submission is a representation that the manuscript has not been published previously and is not currently under consideration for publication elsewhere. A statement transferring copyright from the authors (or their employers, if they hold the copyright) to Plenum Publishing Corporation will be required before the manuscript can be accepted for publication. The Editor will supply the necessary forms for this transfer. Such a written transfer of copyright, which previously was assumed to be implicit in the act of submitting a manuscript, is necessary under the new U.S. Copyright Law in order for the publisher to carry through the dissemination of research results and reviews as widely and effectively as possible.
3. Type double-spaced, and submit the original and two copies (including, where possible, copies of all illustrations and tables).
4. An abstract of 150 words or less is to be provided.
5. A list of 4–5 key words is to be provided directly below the abstract. Key words should express the precise content of the manuscript, as they are used for indexing purposes, both internal and external.
6. Illustrations (photographs, drawings, diagrams, and charts) are to be numbered in one consecutive series of Arabic numerals. The captions for illustrations should be typed on a separate sheet of paper. Photographs should be large, glossy prints, showing high contrast. Drawings should be prepared with india ink. Either the original drawings or good-quality photographic prints are acceptable. Identify figures on the back with author's name and number of the illustration.
7. Tables should be numbered and referred to by number in the text. Each table should be typed on a separate sheet of paper.
8. References should be made by using superscript Arabic numerals, and the full references should be given in a list at the end of the paper. For maximum clarity, abbreviations should be avoided in the references. Whenever a book is cited, the number of the relevant chapter should be given.
9. In general, *Oxidation of Metals* follows the recommendations of the American Institute of Physics in their *Style Manual*, and it is suggested that contributors refer to this publication.
10. **The journal makes no page charges.** Reprints are available to authors, and order forms are sent with proofs.

CONTENTS

Effect of Ti and Ta on the Oxidation of a Complex Superalloy <i>Sherwin W. Yang</i>	375
Effect of a Marker Material on the Oxidation of Nickel in Sulfur Dioxide <i>K. Kowalska, E. Roszczynialska, and T. Werber</i>	399
